

I want a sepearte screen where I can choose the series folder and have our logic go through the season folders for each episode or movie and make sure all of the videos are 1080p. If not replace the bad resolution with the 1080p. I want to be able to select the folder and have it automatically go through the season folders for each episode or movie and make sure all of the videos are 1080p. If not replace the bad resolution with the 1080p. I want to be able to select the folder and have it automatically go through the episodes or movies or anime and make sure it is actually 1080p if not replace the bad resolution with the 1080p. I also want to make sure that when our logic is using vidsrc.sh + vidsrcme.ru it knows how many episodes there are for each season so we don't accidentally miss any episodes for the seasons I want to make sure we download everything for the series.

Audio

DUB

SUB

English dub. Episodes whose dub is not out yet go to the Waiting for dub list.

Quality

1080p (required)

Save to library

Anime — disk1 (where this series already)

New episodes join the existing folder so the series isn't split. If disk1 fills up, they spill to disk3 under the same folder name.

Replace files below 1080p

Same name and folder. The old file is removed only after the 1080p copy passes its check.

Search other sites for 1080p

If this site has no 1080p copy, try Vidsrc, FMovies, NontonGo... in order.

Keep watching for new episodes

Re-checks every 24 h and queues new episodes and late dubs automatically.

File will be saved as

/mnt/disk1/anime/Starfall Academy/Season 1/Starfall Academy S1E7.mp4

5 episodes ready to queue

Settings

Who can use the plugin, where files go, how duplicates are caught, and which sources it uses.

Download engine

The DownloaderWeb engine does the searching, source detection, downloading and verifying.

Engine URL

http://localhost:7878

API key

.....

Test connection

Connected · engine v0.1.0 · 11 site adapters loaded

Who can use this plugin

Users with **Allow this user to manage the server** can always download, change settings and run quality checks. The server refuses those actions for everyone else, even if they call the API directly.

Hidden from other users

The plugin does not appear for them at all.

View and request (recommended)

Other users get a Request page: they can search, see what is already in the library, and ask for a title. Nothing downloads until a server manager approves it.

Open requests per user

5

Auto-approve

Never

Libraries and drives

Add a drive by adding its folder to the library in Jellyfin. Each folder needs an empty `.mediadownloader` file so a dropped mount is never written to.

TV shows · folders come from the Jellyfin library

Keep free on each drive (GB)

50

Scan library after each download

New episodes show up in Jellyfin without a manual refresh.

Staging disk

Downloads land here first and are checked before they move to a library drive.

Staging folder (engine PC)

Pause new downloads below (GB)

~/MediaDownloader/staging

50

270 GB free of 500 GB · 18 GB reserved for running downloads

File naming

Files are named exactly like the web downloader, so libraries built by either one stay in step. This is not a setting.

Show or anime	Starfall Academy/Season 2/Starfall Academy S2E5.mp4
Movie	Stargazer Lines/Stargazer Lines.mp4
SUB and DUB	Same name. [SUB] only appears in the queue.
Also recognised	Starfall Academy Season 2 - Episode 05.mp4 (older files, never re-downloaded)

Duplicate check

Runs before anything is shown as downloadable and again when a job is queued.

Check every library, not only the target one

A show already in Anime is not downloaded again into TV shows. The new episodes go to the folder it already has.

Match by TMDB id as well as by name

Catches folders spelled differently from the site title.

Look in the queue, staging and pending jobs

The same episode is never queued twice.

Treat files below 1080p as replaceable

They show as "720p · replace" instead of "In library". The new copy keeps the same name.

Notify when duplicates are skipped

Off by default; skipped items are always listed under Queue › Skipped duplicates.
